MP3 audio for voice prompts and music for all lift controls.

AudioM offers voice and music in very good quality. The integrated digital amplifier with an efficiency of 90% does not need a heat sink and delivers 2 x 15W. AudioM plays MP3 files in CD-quality (for example, music) and also displays voice messages in several languages in the same quality. All settings are made by the free „AudioM-Konfigurator“ app for Microsoft Windows and are stored together with the MP3 files on an SD card. So you can also change all MP3 files and settings with your PC, notebook or tablet.

Connection Mono

Connection Stereo
